Fund Description

The Teucrium Soybean Fund provides investors unleveraged direct exposure to soybeans without the need for a futures account. SOYB, as a result of the soybean futures it holds, has been specifically designed to mitigate the impacts of contango and backwardation.

Why Soybeans?

- Globally, soybean and soybean products trade has surpassed wheat or total coarse grains (corn, barley, sorghum, rye, oats, millet and mixed grains)¹
- World soybean trade is projected to continue rising rapidly during the next decade, climbing nearly 22 percent by 2025/26¹
- China's soybean imports are rising sharply due to China's rising consumption of animal proteins; soybeans are used as feed in China's swine, poultry, and aquaculture industries.¹
- **SOYB** provides investors and hedgers with the ability to track the price of soybeans, a commodity with an average daily trading value of approximately \$10.6 billion²

Risks and Disclosure

- *Commodities and futures generally are volatile, and instruments whose underlying investments include commodities and futures are not suitable for all investors.*

- *This material must be preceded or accompanied by a prospectus. Please read the prospectus carefully before investing or sending money. To obtain a current prospectus visit the link below:*

- *The Fund is not a mutual fund or any other type of investment company within the meaning of the Investment Company Act of 1940, as amended, and is not subject to regulation thereunder.*

- *Because the Fund will invest primarily in soybean futures contracts and other derivative instruments based on the price of soybeans, an investment in the Fund will subject the investor to the risks of the soybean market, and this could result in substantial fluctuations in the price of the Fund's shares.*

*Based on the April 30, 2018 Prospectus

²Bloomberg, annual daily average of the notional value of all contracts for the period December 31, 2016 to November 30, 2017.

The Teucrium Soybean Fund is a commodity pool that will issue Shares that may be purchased and sold on the NYSE Arca. The Fund is a series of the Teucrium Commodity Trust ("Trust"), a Delaware statutory trust. Additional series of the Trust that will be separate commodity pools may be created in the future. The Trust and the Fund operate pursuant to the Trust's Second Amended and restated Declaration of Trust and Trust Agreement (the "Trust Agreement"). The Fund was formed and is managed and controlled by the Sponsor, Teucrium Trading, LLC. The Sponsor, a limited liability company formed in Delaware, is registered as a commodity pool operator ("CPO") and a commodity trade advisor ("CTA") with the Commodities Futures Trading Commission ("CFTC") and is a member of the NFA.

Fund Objective

The investment objective of SOYB is to have the daily changes in percentage terms of the Shares' Net Asset Value ("NAV") reflect the daily changes in percentage terms of a weighted average of the closing settlement prices for three futures contracts for soybean ("Soybean Futures Contracts") that are traded on the Chicago Board of Trade ("CBOT"):

SOYB BENCHMARK

CBOT Soybean Futures Contract	Weighting
Second to expire (excluding August & September)	35%
Third to expire (excluding August & September)	30%
Expiring in the November following the expiration of the third-to-expire contract	35%

Chicago Board of Trade (CBOT): A commodity exchange established in 1848 that today trades in both agricultural and financial contracts. The CBOT originally traded only agricultural commodities such as wheat, corn and soybeans. Now, the CBOT offers options and futures contracts on a wide range of products including gold, silver, U.S. Treasury bonds and energy.

Expense Ratio: Defined as the amount of income(loss) required for the redemption value at the end of one year to equal the selling price of the Share, as presented in the Form S-1 dated April 30, 2018.

Intraday Indicative Value (IIV): An Intraday Indicative Value is published by NYSE Alternext US for each ETP as a

reference value to be used in conjunction with other ETP market information. The Intraday Indicative Value for the Teucrium Soybean Fund is published under a separate symbol every 15 seconds over the Consolidated Tape and calculated throughout the trading day using the prior day's closing net asset value per share as a base and updating that value throughout the trading day to reflect changes in the value of the Fund's soybean interests during the trading day, all on a per share basis. We believe that for the Teucrium Soybean Fund the IIV calculation is most accurate when the Chicago Board of Trade (CBOT) soybean pits are open.

- *Shares of the Fund are not insured by the Federal Deposit Insurance Corporation ("FDIC"), may lose value, and have no bank guarantee.*
- *Unlike mutual funds, the Fund generally will not distribute dividends to its shareholders. Investors may choose to use the Fund as a means of investing indirectly in soybeans, and there are risks involved in such investments.*
- *Investors may choose to use the Fund as a vehicle to hedge against the risk of loss, and there are risks involved in such hedging activities.*
- *This material is not an offer or solicitation of any kind to buy or sell any securities outside of the United States of America.*

¹During the period when the Excluded Contracts are the second-to-expire and third-to-expire Soybean Futures Contract, the fourth-to-expire and fifth-to-expire Soybean Futures Contracts will take the place of the second-to-expire and third-to-expire Soybean Futures Contracts, respectively, as Benchmark Component Futures Contracts. Similarly, when the August Contract is the third-to-expire Soybean Futures Contract, the fifth-to-expire Soybean Futures Contract will take the place of the August Contract as a Benchmark Component Futures Contract, and when the September Contract is the second-to-expire Soybean Futures Contract, the third-to-expire and fourth-to-expire Soybean Futures Contracts will be Benchmark Component Futures Contracts.
